SUMMARY

Computer Science graduate (B.Tech, June 2026) with hands-on experience in Python, SQL, and Generative AI applied to real data and workflow problems. Built a Retrieval-Augmented Generation (RAG) system using the Gemini API, and a churn prediction model with an analytics dashboard translating data into business-ready insights. Two AI/ML internships in LLM output evaluation, data extraction, and workflow automation. Comfortable breaking business problems into automatable, step-wise components. Quick learner, currently building working knowledge of the Microsoft Power Platform.

SKILLS

Programming & Data:	Python (Pandas, NumPy), SQL (Joins, Aggregations, Filtering, Data Extraction), Data Analysis, Data Validation
Generative AI / LLM:	Gemini API Integration, Prompt Engineering & Iteration, Retrieval-Augmented Generation (RAG), LLM Output Evaluation, Structured Data Extraction, Summarization & Classification Tasks
Automation & Low-Code:	Workflow Automation (Python), Rule-Based Automation Pipelines, Process Breakdown & Automation Logic, Microsoft Power Platform (currently building working knowledge)
Tools & Practices:	Git, GitHub, REST APIs, MySQL, Firebase, Documentation & Governance-Aligned Reporting

WORK EXPERIENCE

LLM Post-Training Intern — Ethara AI *Jan 2026 – Apr 2026*

- Reviewed 60+ AI-generated task submissions daily against defined SOPs, maintaining a 99%+ quality pass rate while flagging roughly 1% for correction.
- Identified and documented model errors and reasoning inconsistencies to support fine-tuning and quality feedback loops.

AI/ML Intern — Agivant Technologies *Jun 2025 – Sep 2025*

- Built Python-based rule-based automation pipelines (Pandas, NumPy) to validate and process a dataset of 10,000+ records for analytics workflows.
- Automated data validation workflows that non-technical marketing and business teams could run independently, removing the need for engineering support on routine data tasks.

PROJECTS

Sahayak Guru — AI Teaching Assistant *Jul 2025*

- Designed and developed an AI teaching assistant utilizing the Gemini API and Retrieval-Augmented Generation (RAG) architecture to support low-resource schools.
- Built automated curriculum generation capability using LLM-driven summarization and content structuring; submitted to Google Cloud Agentic AI Day.

Customer Churn Prediction & Analytics Dashboard (OTT Platform)

- Built a machine learning classification model to predict customer churn probability from subscription and behavioral data.
- Created an interactive reporting dashboard to visualize trends and segments, translating model output into actionable business insights for stakeholders.

LEADERSHIP & COMMUNITY

- Campus Lead, Google Developer Group (GDG) – GNIOT: Selected among 500+ applicants; organized 10+ technical workshops, coordinating logistics and stakeholder communication.
- Organizer, Kotlin User Group (KUG) Gurugram: Co-organized developer meetups with Google and JetBrains engineering teams.

EDUCATION

B.Tech, Computer Science & Engineering (IoT) — GNIOT Completed: June 2026

CGPA: 6.73

ACHIEVEMENTS & CERTIFICATIONS

- Merit Scholarship — 100% Tuition Fee Waiver (U.P. Government); Semifinalist, Microsoft Imagine Cup 2024
- Google Machine Learning Crash Course, Generative AI Fundamentals, Discover Data Analysis — Google
- Solved 400+ Data Structures & Algorithms problems across coding platforms
